Habitat Scavenger Hunt

Which habitat features can you find or create?

Grab a pencil and piece of paper and go outside to your immediate surroundings. Write down, draw or take photos of things you find that reptiles and amphibians could use for food, shelter, water or space. If you don't find anything, consider starting a brush pile and then monitor it to discover new wildlife! Below are some examples. You are on your way to becoming a true Herpetologist!

Somewhere a snake might live

Something a lizard might eat
