KIT 1—‘GOING NATIVE’

Echinacea purpurea | Penstemon calycosus
Phlox paniculata ‘Jeana’ | Monarda bradburiana
Rudbeckia maxima

These plants have a native focus and cover a blooming range from mid-May through August. Monarda bradburiana and Penstemon calycosus are two of the best native bridge plants, meaning their blooms perfectly bridge the spring and summer seasons. Phlox ‘Jeana’ and Rudbeckia maxima will bloom in early-midsummer along with Echinacea purpurea, which can hang on into September.
